DETAILED ACTION

This application is in condition for allowance except for the following formal matters:

Drawings

Figure 2 is objected to because block 202 in fig. 2 should be labeled according to its function.

Claim Objections

The following claims are objected to because:

(Claims 3, 5, 7, 9, 12, 14, 16, 18 and 20) the terms “diode-like” and “resistor-like” are not acceptable in the claim language. Note that the terms “diode element(s)” and “resistor element(s)” or “diode-based” and resistor-based” are acceptable.

(Claims 1 and 12) Claims 1 and 12 must define what the switch element is (i.e., a diode) that it can be either in a high or low impedance state.

(Claim 1) Claim 1 must define what structure that makes the switch element either in a high or low impedance state (i.e., biasing structure)

(Claims 1 and 12) the limitation “AC logical state” and “logical AC output” at the output signal line as presented in these claims is unclear and incomplete. Claims 1 and 12 must define how and what being implemented and/or structures/steps utilized to produce/obtain a mixed of both AC and logical signal at the output signal line.

Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims.

(Claim 12) the phrase "may be" is not acceptable in the claim language; “is” or “to be” is acceptable.

(Claim 12) the word “wither” appears to be a typo.

Art Unit: 2825

Reasons for Allowance

Claims 1-20 would be allowable because the prior art of record does not teach or suggest a nanoscale logic gate and a method for producing, in a nanoscale logic gate, in the manner as recited in the claims.

Conclusion

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter
